

Custom Solution Experts

Every day producers around the world are faced with new challenges; commodity pricing, time constraints, staffing complications, safety concerns, environmental issues, budget restrictions, and disruptive market volatility including unforeseen outside influences.

We've made it our mission to initiate new dominant solutions to elevate production to higher, more profitable levels for our customers, partners, and friends around the world. As explorers, we cultivate innovative technology and provide a team that drastically surpasses your expectations every step of the way.

History of Zedi

Zedi was founded in 1987 as Z.I. Probes. Our innovative precision downhole instruments for oil and gas solidly built our reputation for being a technology leader, while earning international acclaim as a result of our ingenuity and promise to quality.

Realizing the most accurate production data would be achieved directly at the asset, we applied our technology to surface level equipment. In 2001, we revolutionized the way production companies viewed their data. Our end-to-end system delivered the data that producers around the world found crucial to increase production.

Zedi has grown from a technology start-up, to a reputable international technology leader through continuous developments and acquisitions to provide producers a vast range of solutions to maximize production. The Zedi difference is our real-time view of remote assets, high-resolution data, two-way communication for precise monitoring and control, that's all backed by our dedicated team members.

Our endless exploration provides our customers with exceptional tools to increase production with a strong commitment to predictive analytics, and artificial intelligence. Our rich heritage drives our modern journey to pioneering autonomous production as the dominant solution to bring your production, profits and sustainability to all new levels.

Strong Relationships

We are focused on high quality service delivery and exceeding customers' expectations by providing support in the field and in the office.

With 24/7 call center support and service, a team of experienced field technicians, and virtual operators monitoring your field with the Zedi Control Center, our team builds a relationship with you by discovering how our systems can best integrate with yours.

We pride ourselves on our simple and reliable service to ensure you have access to what you need, when you need it.

More Productive, More Profitable, More Sustainable

Production potential is something every person, company, and team has within them. It's discovering the right tools, and people best suited for each challenge that can ultimately attain your optimal goals, and define your substantial long term growth and continued success.

We believe loyalty is a two-way street. Which is why we continuously advance our artificial intelligence, machine learning, and predictive analytics to develop distinct market gains for our customers. Value is recognized in our automation, SCADA, cloud security, IIoT platform, and sensors that all assist in capturing the relevant data you need to reach your most extreme production targets.

Our flexible integrated solutions can easily be adjusted to fit your exact needs while giving you the advantage of one easy to work with source that will deliver production technology and service excellence.

Our Values

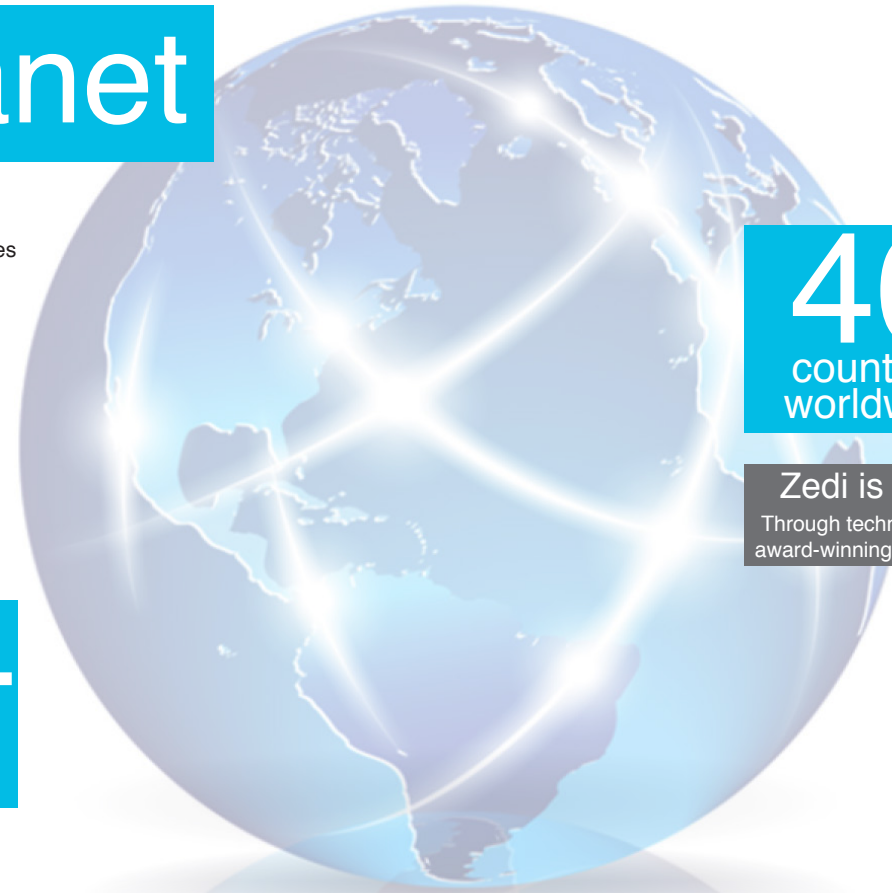

- Deliver on our promises
- Reward creative teamwork
- Communicate with clarity
- Grow through innovation
- Prioritize workplace health and safety

Sensing the Planet

Continuous Platform Enhancements

We define our industrial quality remote monitoring and control platform at consumer prices by ensuring our customers always have the most advanced SCADA solution.

Our accomplished team of engineers, developers, and IIoT experts drive our innovative platform enhancements to give you leading-edge data to promote your production, profits and sustainability to new heights.

Software Solutions

Simplify and scale your business process with Zedi's secure cloud infrastructure

- Create efficiencies & scalability
- Reduce operating cost
- Improve accuracy and timeliness
- Optimize Production
- Always updated

Automation Solutions

Zedi practically started the IIoT revolution with our vision, exploration and innovation

- Custom Engineered Solutions
- IIoT Expertise
- Control and Optimization
- Solution to deliver results
- 24/7 Customer Care

Measurement Solutions

Safe and reliable field experts backed by technology

- Loaded with safety
- Backed by technology
- On and Off-shore experts
- Integrated Lab data
- Shell certified

Lab Solutions

Fast & accurate, on-site lab solutions backed by technology

- We do it all, everywhere & fast
- on-site abilities with 9 labs
- Backed by technology
- Expert Project Management
- Dedicated Chemists

Artificial Lift Solutions

Get the most from your reserves with well site intelligence

- Best in class service
- Accelerated production
- Optimized performance
- Wellhead intelligence

Field Solutions

Decades of safe and reliable field expertise

- Expertly trained
- Cost flexibility
- Best in class ops
- Loaded with safety
