# Reputable SCADA Cloud

## RESULTS

• Advanced technical requirements easily exceeded

• Peace of mind of data availability today, and tomorrow

• Increased visibility into production delivered better return

• Tighter cyber security for their data than ever before

• Well site optimization created more profits and sustainability

• Increased drilling activity with renewed focus on core business

## APPLICATION

Zedi SaaS SCADA
Zedi Access and Zedi Go mobile app
Zedi Project Management
Zedi Tank Monitoring and Control

## CUSTOMER

Texas panhandle area oil & gas producer

## CHALLENGE

Oil producer that specializes in revitalizing low volume oil and gas production was experiencing that the small, start-up SCADA company they had agreed to work with just a year ago was no longer supporting their system with security updates, and was unable (or willing to even try) to meet new advanced, and always growing technical requirements.

The customer was struggling to find a complete SCADA system that they felt confident in their cyber security, overall continuous development and would still meet their always growing data and technical needs that would ultimately improve production with marginal wells and have a clear view of total production and detailed analytics.

Trust was very low with their current provider for long-term business health, and they needed access to the right data to focus on their core business and continue to improve operations.

**"Our comfort level with how long we would to have access to our historical data was getting lower everyday. The SCADA start-up we were using failed to meet any of our new technical requirements, wasn't updating the system with new security measures and made us uneasy on many levels."**

Texas panhandle area oil & gas producer

## SOLUTION

Understanding the longevity, and positive, long-standing reputation of Emerson and the value that they now placed on those aspects they called Emerson and described their main concerns. We actioned quickly and effectively to get Zedi SaaS SCADA set up for them and get them the detailed, defined and actionable data insights from their assets.

Their people were quick to download the mobile app, Zedi Go to be able to enter, monitor and manage operational data from their phones; even in the field. Now, office personnel could instantly get field data and all employees could be up to date with live data to make important business decisions at any given moment.

Cyber security concerns were put as ease with layers of well-positioned security, testing, updates and even included two-factor authentication for authorized users to bring their security to a whole new level.

Software updates were frequent, effortless and easy while meeting and exceeding the technical requirements they needed to gain actionable insights, detailed advanced data sets and easy to use dashboards.

Now, with increased visibility into production, and improved control leading to better overall production results. Zedi SaaS SCADA positively impacted the way that the customer can optimize their wells.

There has been excellent success with their current wells and have been enabled to focus on their core business. Emerson's Zedi SaaS SCADA not only provided them with the actionable data and analytics they needed, but also gave them peace of mind that their data is safe, secure and will be the most technically advanced insights they can get for not only todday, but for every tomorrow in the future with worry.
