

Zedi Cloud SCADA delivers clean, consistent, real-time data that enables focus for Texas producer

RESULTS

- Leveraging clean, consistent, real-time production data through Zedi Access to make better business decisions
- Increased time and renewed focus on core business
- Accurate, complete data that is easy-to-read and understand while also available to each team member with differing permissions granted to different users

APPLICATION

Oil production company needed clean, accurate and insightful data from SCADA to be able to make better business decisions

CUSTOMER

Independent oil production company in South Texas

CHALLENGE

An oil production company with 42 wells had a problem getting accurate production data from their existing in-house SCADA system. They had spent many years and lost large amounts of profits trying to get the data they desired.

There was no unified method of collecting, managing and reporting their data, and personnel were spending many extra hours tracking down and sorting the data they did have.

Several team members needed different data information for different reasons. Ideally they wanted to grant separate permissions to different users.

They realized having the in-house SCADA system wasn't really helping them at all and they needed an alternative to gain the data they needed.

“Total chaos was the best way to describe our in-house SCADA system and what it was like to try and extract any qualifying data. It was a complete mess of unorganized data that our team spent more time trying to sort through than it was worth! It was driving me crazy that we had spent all kinds of money and time trying to patch this system together only to realize we couldn't get the right information out of it when we needed it the most to make any decisions.”

Texas Oil Producer
Chief Operating Officer

SOLUTION

The Junior sized company asked Zedi to migrate their current and historical production data into one platform. The full migration was quickly and easily accomplished without Zedi engineers even needing to set foot on site.

Zedi Access aggregates a wide range of data, storing it securely on the cloud, providing 24/7 access to data and custom reports to all authorized personnel. Within just a couple of weeks Zedi Access was successfully put in place and being utilized by the team to gain the data and reports they need.

Now the team has complete, accurate data that's easy to understand where and when they need it. Each team member was granted differing permissions to view only the relevant data they need for each role, complete with alarms that they can adjust for exact needs.

Full Zedi Access training was provided and 24/7 Customer Care team is always available for any help or questions. Evergreen cloud SCADA will automatically update with upgrades and provide secure data and reports that will enable the team to focus on their core business with ease.
