# Zedi Roughneck – Feb 24th Release Notes

The following enhancements and bug fixes are will be released on Monday Feb 24th, 2020.

Enhancements:

1. Improvements to MOC email notifications
   a. Better description of the MOC Status Change in the subject and body of the email
   b. Indication of other people who also received the same email

2. Ability to add attachments to MOC's post approval

   Anyone who was involved in the MOC as an originator, reviewer or approver will now be able to go into that MOC and add attachments after the MOC has been approved.

3. MOC Administrators can now reassign the originator on all MOCs

   Any user that has the MOC Administrator permission will now be able to go into any MOC and reassign the originator. This helps resolve the issue of MOCs that are not being addressed or being moved forward to completion.

4. Waiting for Status on MOC Work Orders

   Work Orders associated to MOCs will now have the option of adding a "Waiting for Status".

5. Additional Reportable Fields in the Location Module

   For most companies, the Licensed Operator and Well/Facility Operator have been added as reportable fields when using the advanced search and export to Excel features.

Defects:

1. Fixed an issue when searching WO's related to pipelines by location hierarchy
2. Addressed several issues related Roughneck when using Google Chrome
3. Addressed an issue where multiple WO email notifications were being sent out in error.
4. Several other minor bug fixes.
